

Designed with an eye to the future

Improving cooperation and coordination between services

SASKATOON CIVIC OPERATIONS CENTRE

The greenfield site consists of a Transit Operations Facility (TOF) with storage capacity for 250 buses, 29 maintenance bays, equipment and parts storage, administration offices and future expansion capabilities. The site also includes a new Snow Management Facility, a railway berm and parking for both staff and visitors. It is designed to allow for future Compressed Natural Gas capabilities and future expansion without affecting ongoing operations.

The TOF's exterior responds to the City of Saskatoon's principles of quality, durability, security, maintainability and accessibility, while considering contextual balance between Saskatoon's rural and urban environments. Cladding colours emphasize Saskatoon's horizontal prairie grasses, along with a bottom-to-top gradient of colours that reflect prairie-to-sky. The main entrance and Administration block façades are of a human scale to emphasize natural light, exterior views and accessibility. The project was completed two weeks ahead of schedule and on budget.
